Height: 10 inches

Spread: 10 inches

Sunlight: ○

Hardiness Zone: 9a

Other Names: Manfreda x Agave

Group/Class: Mad About Mangave Collection

Description:

This interesting, unique selection produces dark green leaves that stay curled upwards like a teardrop, topped with copper terminal spines; grown primarily for foliage; a great low-maintenance patio container plant; must have good drainage

Ornamental Features

Praying Hands Mangave is primarily valued in the garden for its decidedly oval form. Its attractive succulent narrow leaves remain dark green in color with pointy coppery-bronze spines and tinges of brown throughout the season.

Landscape Attributes

Praying Hands Mangave is an herbaceous perennial with a shapely oval form. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Praying Hands Mangave is recommended for the following landscape applications;

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Growing With You Since 1926

Planting & Growing

Praying Hands Mangave will grow to be about 10 inches tall at maturity, with a spread of 10 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.

Praying Hands Mangave is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a canvas of foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, this plant may be too tender to survive the winter if left outdoors in a container. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
